Schorn & Groh GmbH | Karlsruhe | June 2017

FLEECE-BACKED VENEERS, AVAILABLE WITH PLAITED SURFACE

Inspiration meets innovation.

Plaited veneers open up a new dimension in terms of design! The latest creation from Schorn & Groh is muto GRID. The plait patterns are fascinatingly three-dimensional, which you can not only see, but also feel. Five designs are currently available from stock. Thanks to a fleece backing, the veneers can be processed easily and in many ways. This extraordinary product is made from individual, pre-sanded veneer sheets.

In a complex process, the single pre-sanded leaves of veneer are plaited to create highly diverse surfaces and then backed with special fleece. As a result, the individual strips do not move against each other. muto GRID has a high strength and can still be bent easily. This product is therefore also ideally suited for multidimensional deformations and substrates that are difficult to process. The veneer sheets can be easily processed like normal veneer fixed dimensions and pressed onto boards with any common veneer press. muto GRID is available in a standard size of 2.44 x 1.22m with an average thickness of 1 - 1.2mm (depending on the design). The surfaces can be finally lacquered or oiled.

In addition to the five available designs, individual variants are also possible according to customer requirements (muto GRID exclusive). There are hardly any limits to your imagination: More than 100 types of wood can be flexibly combined. Many patterns known from weaving can be realized. The only condition is that the veneer strips are not narrower than 2cm. You are also free to choose the format - muto GRID exclusive can be manufactured up to a maximum size of approx. 3.05 x 1.22m. The production time is two to six weeks, depending on the complexity of the design and the ordered quantity.

At Schorn & Groh you will also find other exciting fleece-backed products known under the name "fleece'n'flex PLUS", including veneers with structured surface, with HPL backing, with perforated surface, with melamine-coated surface and extra thin sanded veneers for backlighting. With the plaited variant of muto GRID, Schorn & Groh is further expanding its extensive product portfolio and innovation leadership.
