Butt Cut:

fascinating end-grain veneer in sheets

Butt Cut is razor-thin end-grain veneer cut from fine wood. Its fascinating appearance is created by joining together many small pieces of veneer.

End-grain wood has a special rustic and natural character. It is obtained by cross-cutting the tree trunk rather than cutting it length-wise. When this technique is used, the annual rings form highly decorative circular patterns.

Butt Cut offers many advantages over solid end-grain wood. The thinness of the veneer relieves the stress in the cross-cut wood while the fleece on the back lends additional stability. Butt Cut is easy to work with. When handled properly, the product shows no trace of glue bleed-through, warping or distortion.

The optional coating of melamine protects the wood from moisture. Many designs are possible with Butt Cut. We currently offer 16 variants in practical sheets.

Ordering made easy, starting with just one sheet

You can order BUTT CUT by the leaf in 16 design variants, in the standard size of 2,600 mm x 1,250 mm and with a thickness of +/- 0.7 mm:

Schorn & Groh Veneer: known around the world

Schorn & Groh has been a leader in the market for high-quality veneer for decades. We offer more than 140 wood species from all continents as raw veneer, spliced veneers and fleece-backed spliced veneers.

When purchasing our raw material, we carefully select the right trunks and burls and place great value on sustainability in forestry management.

Veneers of excellent quality are created in work still done by hand. Gentle handling ensures that the character and natural aura of the wood are preserved.

In Eschelbronn in southern Germany we fulfill customers' requests for veneers that are cut to size and matched, fleece-backed, sanded and pre-lacquered.
